Asana AI

Automate across tasks, projects and portfolios in new builder

Overview

The new vertical automation builder brings project and portfolio automations into one place.

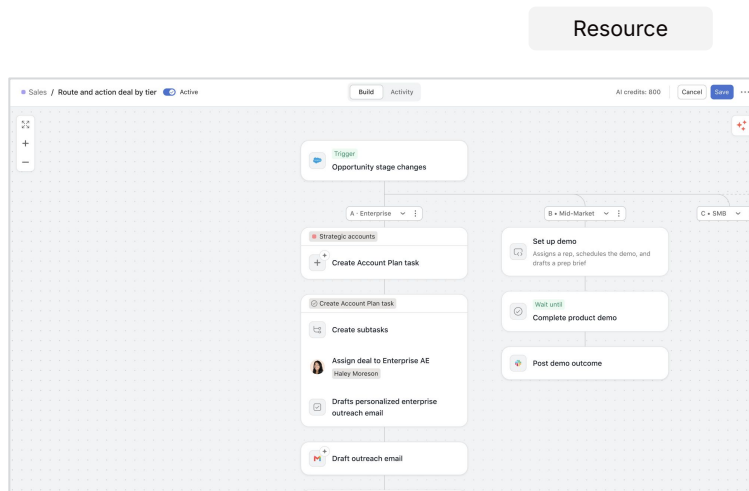

Key benefits

- Automate across tasks, projects, and portfolios in a single automation
- Replace manual updates and custom scripts
- Minimize error by centralizing automation in one place
- Act on many tasks at once inside a named project, narrowed by filters

Key use cases

- Strategic planning & portfolio management
- Project management
- Business reviews

How it works

Set the scope on each node to choose what the automation triggers from and what it acts on.

Supercharge your team with prebuilt AI Teammates

Overview

Deploy prebuilt AI Teammates with skills that are tailored to real workflows across marketing, ops, and IT as well as industries, including healthcare, manufacturing, retail, and professional services.

Key benefits

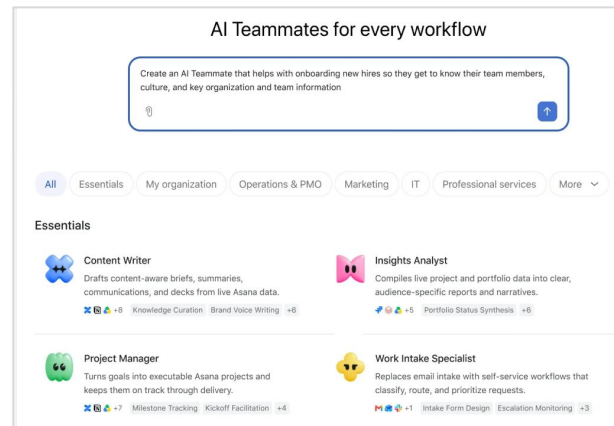

- Collaborate with AI Teammates where the work is already happening
- AI Teammates are multiplayer by design and work alongside multiple people / teams inside real workflows, just as human teammates would
- AI Teammates become smarter with every workflow as prior feedback, decisions, and context compounds over time

Key use cases

- Campaign management
- Project management
- Strategic planning & portfolio management

Resource

How it works

Access 30+ prebuilt AI Teammates in the AI Teammate Gallery or build your own (no code required). With shared memory, enterprise-grade governance, and organizational context, each prebuilt AI Teammate is already ready-to-go on day one.

Always stay one step ahead with Asana Dash

Overview

Asana Dash is your personal AI Chief of Staff who surfaces what needs your attention and helps you take the next best action. It already knows your goals as well as your priorities and can seamlessly route work to the right AI Teammate.

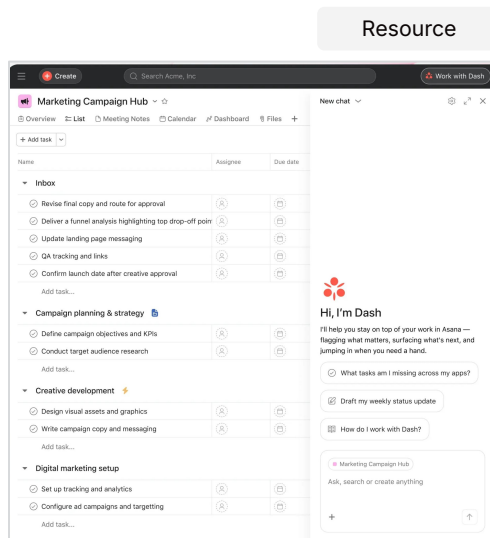

Key benefits

- Remain on top of every important decision
- Gain visibility into the progress of initiatives and next steps
- Understand what the blockers are and how to address them proactively

Key use cases

- Project management
- Campaign management
- Onboarding

How it works

Asana Dash is available on AI Teammates-enabled Starter, Advanced, Enterprise, and Enterprise+ plans.

Kick off work faster with the right AI Teammate

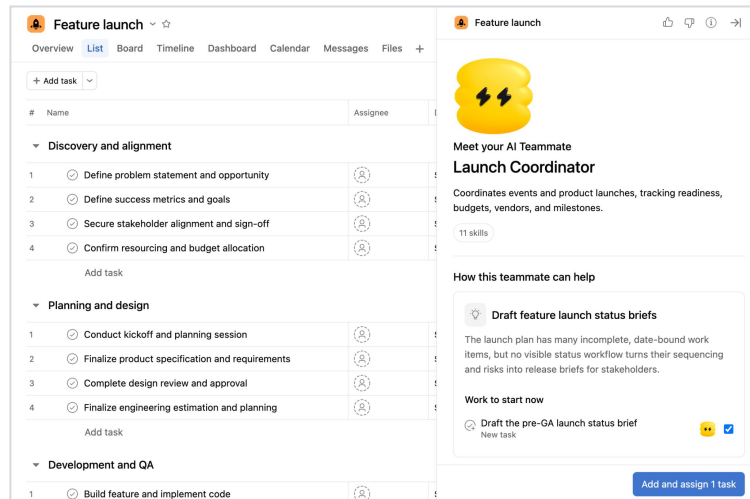

Overview

Get personalized AI Teammate recommendations for your project based on your team's workflow

Key benefits

- Skip the guesswork on which AI Teammate fits your project
- Walk away with a task list for your AI Teammate instead of a blank slate
- Improve your project's workflow to ensure work gets delivered on time
- Minimize the potential for any delays in project progress

How it works

Users will receive contextual nudges and AI Teammate recommendations for specific use cases. Recommendations are available for all projects in Asana.

Work seamlessly across teams & tools with AI Teammate integrations

Overview

AI Teammates can now integrate with the tools that teams use daily, including GDrive, OneDrive, Gmail, Google Calendar, Outlook Mail, Outlook Calendar, Slack, MS Teams, Canva, and HubSpot so they can stay focused on the right work.

Key benefits

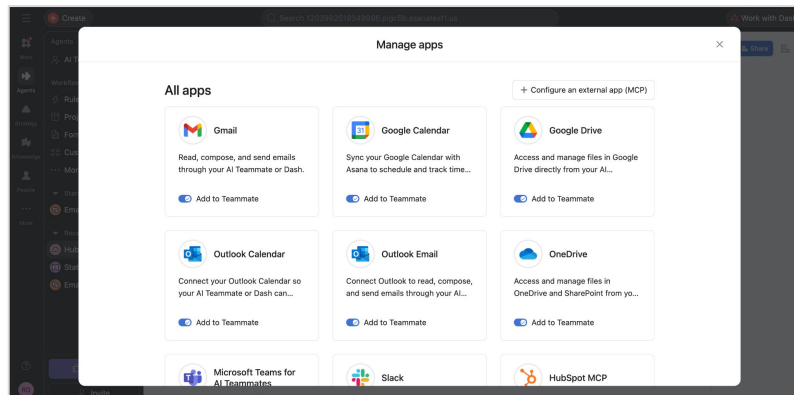

- Enable AI Teammates to work where your teams are already operating
- Access scheduling and critical work context when triaging and prioritizing work
- Surface updates without manual copy/paste

Key use cases

- Campaign management
- Project management
- Request tracking

Resource

How it works

AI Teammates can extend their capabilities and connect to external tools. It cannot access content or take actions that it does not have permissions for.

Workflows & automation

Automatically route the work with round robin assignment

Overview

Automatically route and distribute high-volume work across the team using a simple rule action and configuration (based on a preset list of assignees).

Key benefits

- Triage workflows at scale without manual effort and AI credit consumption
- Distribute the work evenly and predictably
- Build and implement support workflows with greater confidence

Key use cases

- Request & support tracking
- Resource management

The screenshot shows the 'Change assignee' rule configuration in Asana. It includes a dropdown for 'Choose action' set to 'Change assignee', another dropdown for 'Choose an option' set to 'Assign round robin', and a 'Rotation order' list with five members: Jim James, Haley Moreson, Camila Lu, Mark Henderson, and Janice Wells. There are also checkboxes for '+ Add assignee' and 'Skip out-of-office teammates'.

How it works

In the rule builder, select “Assign round robin” within the “Change assignee” action. Once you’ve entered your list of assignees, the rule will automatically assign tasks to the next person in rotation each time the rule runs.

Plan and execute the work faster in one place with pages

Overview

Centralize the planning details, strategy briefs, meeting notes, decision logs, and more in Asana with pages. Easily convert the plans and ideas into actionable next steps.

Key benefits

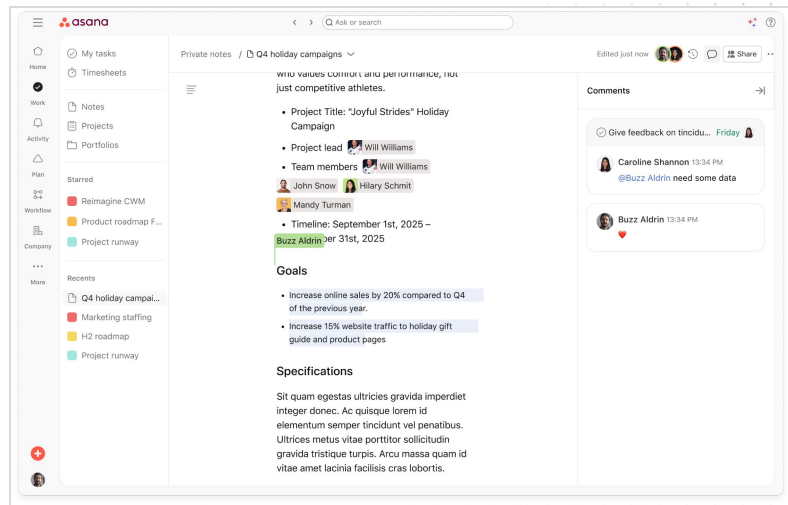

- Move faster from alignment to action without toggling across scattered tools
- Enhance follow-through with ability to live edit, track version history, interact with comments, etc.
- Reduce context switching with humans and AI agents collaborating where the work happens

Key use cases

- Project management
- Strategic planning & portfolio management
- Campaign management

Resource

How it works

There are two ways to create a new page in Asana: 1) Create a page from within a project 2) Create a page from the (+) Create button on the top navigation bar and attach the page to any project, task, portfolio, team, or leave it standalone

Navigate Asana with greater speed, clarity, and focus

Resource

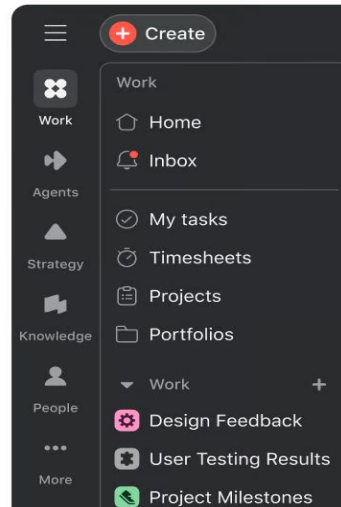

Overview

A redesigned navigation and sidebar groups your work into focused modes or dedicated spaces so all your work remains consistently organized.

Key benefits

- Enhance focus and productivity with a sidebar tailored to your work (e.g. find pages and other planning details in 'Knowledge' mode; toggle to 'Work' mode to locate all your tasks, projects, and portfolios)
- See your workflows at a glance
- Access the work you need faster, from the day-to-day tasks to the strategic initiatives

How it works

The redesigned sidebar groups Asana surfaces into focused modes. Stay focused on the type of work you're doing - from monitoring company-wide strategy to managing workflows and deploying AI Teammates.

Keep group discussions organized with threaded comments

Overview

Reply directly to comments in tasks, goals, messages, and status updates to create organized sub-conversations that minimize confusion and context switching.

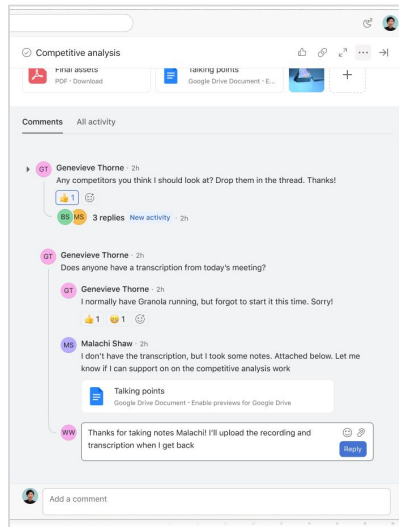

Key benefits

- Maintain and preserve clear context throughout comments and discussions
- Improve collaboration with communication that's easy-to-follow
- Keep discussions organized and consistent across both mobile & web

Key use cases

- Request tracking
- Project management
- Campaign management

How it works

Users can reply directly to any comments in Asana (across tasks, goals, messages, and status updates), creating a dedicated thread in response.

Drive better outcomes with in-product guidance on AI prompts

Overview

AI Studio evaluates the instructions you write for AI automations and proactively offers rewrites or inline suggestions for improvement.

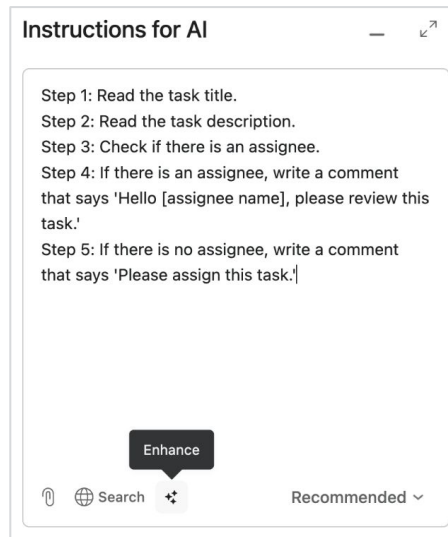

Key benefits

- Build higher quality AI automations at speed
- Deliver accurate and consistent results with improved AI prompts
- Maintain full control over the AI automation - suggestions are always optional and never applied automatically

Key use cases

- Project management
- Request tracking
- Campaign management

How it works

AI Studio analyzes the written prompt and provides suggestions for improvement. Users can accept, disregard, or modify the suggestions.

Move work forward faster with the Asana for Slack bot

Overview

You can at-mention the Asana for Slack bot and use natural language to create tasks, check on the status of initiatives, and track progress directly from Slack.

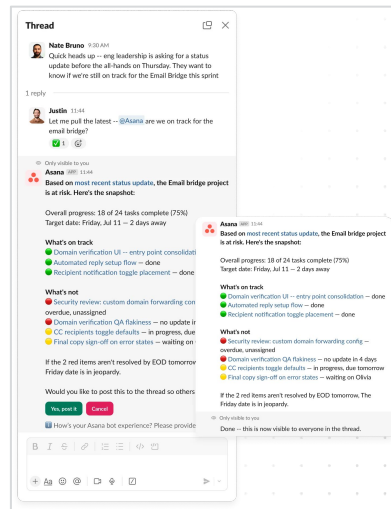

Key benefits

- Manage work in Asana directly from conversations in Slack
- Save time without manual toggling between tools and platforms
- Quickly access information using simple, natural language (e.g. "@Asana, what is the status of the upcoming product launch?")

Key use cases

- Onboarding
- Goal tracking
- Project management

How it works

At mention (@Asana) the Asana for Slack bot in any Slack channel or thread to create tasks or ask questions.

Standardize project and portfolio access with more granular settings

Overview

Portfolio admins can automatically set projects that are added by project admins to the portfolio to share access with portfolio members.

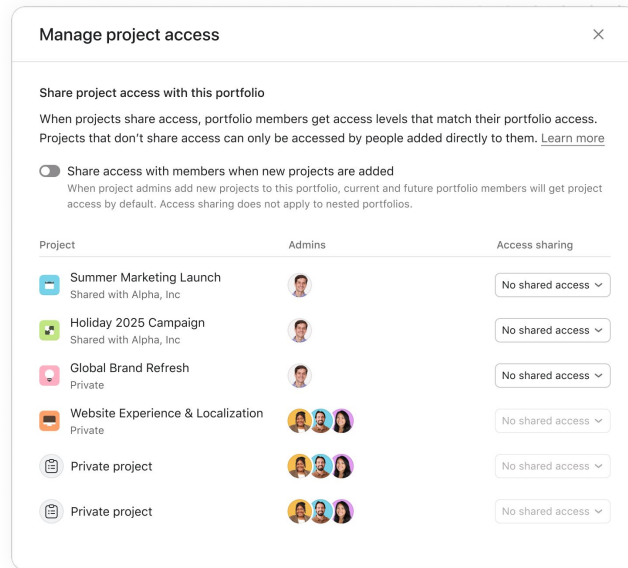

Key benefits

- Ensure consistent access across all projects within a portfolio without manual configuration
- Give admins clear visibility into who can see what

Key use cases

- Strategic planning & portfolio management
- Admin controls & security

How it works

Automatically grant portfolio members access to new projects. Individual project admins can still override the default on a per-project basis.

Resource management

View timesheets the way your team works

Overview

Timesheets now support a Sunday-start weekly view for teams or organizations that operate on this schedule.

Key benefits

- Provide a clearer, more intuitive view of the full workweek
- Drive greater accuracy in timesheet reporting
- Streamline time entry and approval workflows

Key use cases

- Resource management
- Project management

Resource

Timesheets						
+ Add project		< Oct 2 - Oct 8 >		☐ Show weekends		Submit
Name	Mon, Oct 2	Tue, Oct 3	Wed, Oct 4	Thu, Oct 5	Billable time	Total time
Atlas Brand Refresh	3h 00m	2h 15m	2h 30m	2h 45m	5h 00m	10h 15m
General work on project	3h 00m				3h 00m	3h 00m
Set objectives		1h 15m		2h 00m	3h 15m	3h 15m
Research trends					4h 00m	6h 30m
+ Add task						
Horizon Website Redesign						
Summit Q3 Campaign						
Bluewave Social Media Ca...	2h 30m	2h 30m	3h 30m	3h 45m	6h 00m	12h 15m
	8h 00m	8h 00m	8h 00m	8h 00m	18h 00m	32h 00m

How it works

Available in the Timesheets and Budgets add-on.

Admin controls

Streamline enterprise workflows with cross-app access

Resource

Overview

Enable admins to pre-authorize approved third-party apps without requiring individual manual setup.

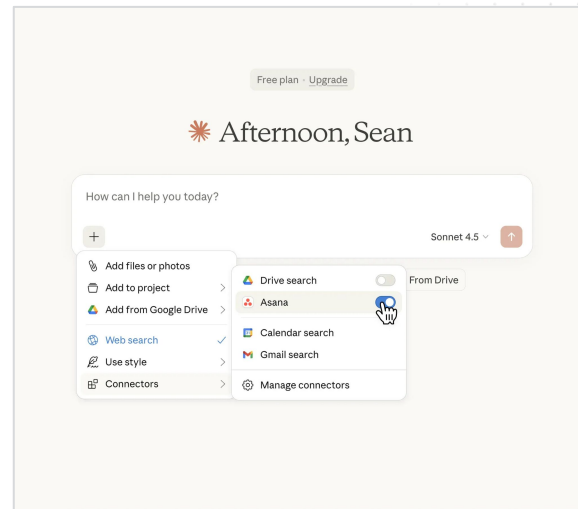

Key benefits

- Enable teams to move work forward faster with pre-authorized apps
- Enhance security and control with centralized authentication
- Ensure work context remains in-sync across different tools

Key use cases

- Enterprise security & controls
- Project management

How it works

In the Asana Admin Console, navigate to Security and Cross-app access to turn on the access toggle.

Streamline and secure company-wide access with Microsoft SSO

Overview

Admins can now require Microsoft Single Sign-On as the primary authentication method for the organization.

Resource

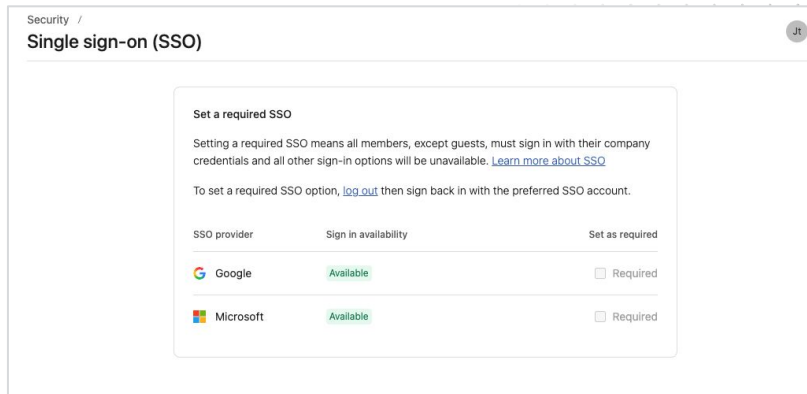

Key benefits

- Enable consistent and secure access to Asana for teams using Microsoft 365
- Simplify login processes through a singular authentication method
- Reduce overhead by eliminating password management and multiple login options

Key use cases

- Admin controls & security
- Onboarding

How it works

Organization admins can set Microsoft SSO as the required login and sign-up method for all members.

Unlock AI productivity with real-time insights into consumption

Overview

Asana Dash and AI Teammates (now available on all Asana AI-enabled plans) are powered by AI Requests. Admins can track and manage AI usage across the organization as well as maintain centralized, enterprise-grade governance in the admin console.

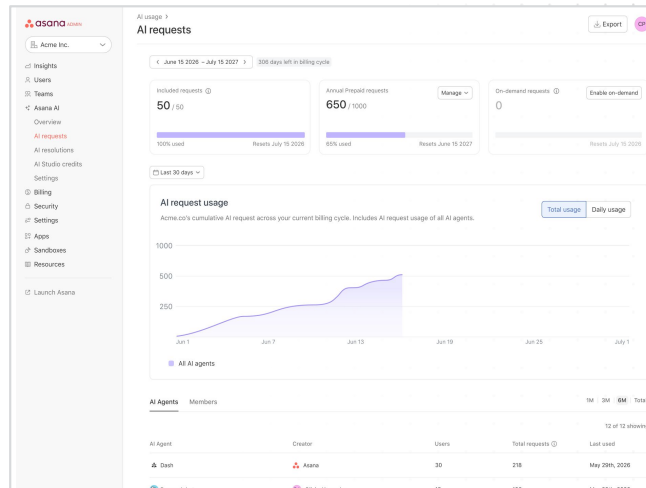

Key benefits

- Access insights into company-wide AI usage (the total AI Requests consumed by AI Teammates and Asana Dash, the remaining balance, usage data, etc.)
- Manage AI adoption with greater confidence through the admin console
- Prevent disruption to AI workflows with proactive notifications as usage reaches monthly thresholds

Key use cases

- Admin controls & security
- Business reviews & reporting

How it works

Admins can manage and view the consumption of AI requests centrally in the admin console.
